THERMOLITE™ SOLAR PANELS

— more uptime and less fuel consumption —

NOW WITH NEW 24V MODELS
Harness the power of the sun and eliminate flat battery callouts

ThermoLite® solar panels provide a sustainable power management solution which will increase battery life while reducing fuel consumption and emissions. Tough, weatherproof panels collect solar energy, even when light levels are low to keep your battery in prime condition. Your engines will no longer operate just to charge the battery, reducing fuel consumption and CO₂ emissions while helping to meet sustainability goals.

Always covered through combined solar power

The 12V models (40W&110W) are designed to use on your refrigeration unit (even competitor’s unit). With combined solar power, your unit is always doing what you need it to do – protecting your cargo – rather than using energy and fuel to top up its battery. We have extended our range with new 24V kits, for extra performance on tractor and tail lift applications.
ThermoLite™ Solar Panels

Features

- Generate ample charging current even in low light conditions, ensuring that the unit battery will stay charged, even in winter.
- Exceptional efficiency delivers greater charge than competitor systems.
- Low profile design for height restrictions & easy installation.
- Simple, rapid 60 minute installation on any application. Kit includes all necessary components under one part number.
- Tests in extreme weather conditions prove exceptional durability of sealed electronics and flexible polymer cells.
- Extreme durability and resistance to trailer washing and chemical cleaning process.
- Full 2 year Thermo King warranty on parts.
Applications

ThermoLite™ solar panels are particularly fit for these 3 applications:

1. **On tractor roof (24V):** Extend your tractor’s battery utilization and life and save on battery exchanges, breakdowns and fuel consumption 80W-220W

2. **For our Thermo King reefer unit (12V):** Stay connected. Extend your battery lifetime, save fuel and CO₂. Up to 110W

3. **For tail lift (24V):** Keeps your tail lift running and your batteries charged. Up to 220W
